

TUBE STATION

flexibility in power and communications

TUBE STATION

flexibility in power and communications

Tube Station is a vertical distributor of voice, power and data. Positioned over or near a floor unit, power and communication outlets are raised above the desk with an option of three or four outlets.

The station can be used as a free standing 'push to' unit or a screen supported product (see separate literature). It can also be integrated with the majority of OEM screens with special connectors.

3 WAY
